

ABSTRACT OF THE DISCLOSURE

In the wire dot printer head and wire dot printer of the present invention; a plurality of armatures are rockably mounted in positions corresponding to a plurality of cores.

5 On the end face on the core side of a wire, a plurality of receiving members are provided. And a plurality of pressing members for pressing the armature to move away from the core are mounted in contact with these receiving members. The receiving member therefore can prevent the pressing member
10 from damaging to break the armature.
